Neville Ken

Software Engineer | Backend systems and APIs

Kenya | nevilleken5@gmail.com | github.com/KingN3V | linkedin.com/in/neville-ken-786901262 | nevilleken.vercel.app

SUMMARY

Computer science graduate who designs, builds and deploys software end to end: APIs and databases, plus the web and mobile apps that sit on top of them. I have shipped a Flutter and FastAPI point-of-sale system that an agrovet uses every day, and an online shoe store with its own admin dashboard.

PROJECTS

Agrovet POS | Flutter, FastAPI, PostgreSQL

API docs | Backend repo | Mobile app repo

- Built a mobile point-of-sale app and REST API used daily by an agrovet to record sales, manage stock and track customers.
- Every stock change is logged as a movement (sale, restock, cancellation, expired, damaged), and stock can never go negative.
- Locks product rows while stock is checked and deducted; the order, its items, the stock change and its movement records commit in a single transaction.
- Price and cost are snapshotted on each order item, so later price changes never rewrite past sales or profit.
- Credit sales with part-payments, plus reports for sales summary, top products, low stock and outstanding balances.
- JWT authentication with rate-limited login and password reset; API documented in Swagger.
- Automated pytest suite run against a separate PostgreSQL test database, covering payments, order cancellation, concurrent orders and migration checks.
- Deployed on Render with a Neon PostgreSQL database; daily automated backups to Cloudflare R2, restore-tested.

Kicks JJ | Next.js, FastAPI, PostgreSQL, Cloudinary

Live site | Repo

- Built an online shoe store for a real client, with a JWT-protected admin dashboard to add, edit and remove products.
- Product filtering by brand, category, size and price; images hosted on Cloudinary.
- Orders are sent to the seller on WhatsApp with the shoe and size pre-filled.
- Frontend deployed on Netlify; backend on Render with a Neon PostgreSQL database.

EXPERIENCE

IT Attachee | Kenya Power and Lighting Company (KPLC), Kisii

May 2025 – July 2025

- Contributed to the FastAPI backend of a team-built application that tracks computers entering and leaving the office.
- Helped resolve IT support tickets from staff.
- Diagnosed and resolved network connectivity issues using ping and related troubleshooting, supporting a stable enterprise network.
- Assisted with the daily operation and maintenance of the regional server room.
- Took part in the physical installation and deployment of fiber optic network infrastructure.

EDUCATION

BSc Computer Science | Maseno University

2022 – 2026

SKILLS

Backend: Python, FastAPI, REST APIs, JWT authentication
Databases: PostgreSQL, MySQL, Alembic migrations
Testing: Pytest
Frontend and mobile: Flutter (Dart), Next.js, HTML/CSS
Tools and deployment: Git and GitHub, Render, Neon, Vercel, Netlify, Cloudinary
